

A monthly evidence collection pairs a flexible curation model with a five-step, expert-led production process

1 Choose a curation model

Core journal collection

Regular screening of selected high-impact journals.

Agency priorities

Preferred journals, article types and inclusion rules.

Curator network

Senior practitioners recommend or select articles.

Specialist focus

A disease, setting, population or geographic region.

Use one model — or combine them to match local needs.

2 Produce the monthly collection

- 01

Expert selection

Identify what matters for practice
- 02

AI-assisted drafting

Prepare substantial structured summaries
- 03

Human review

Check accuracy, context and relevance
- 04

Organisation

Apply consistent topics, diseases and dates
- 05

Publication
